In Edumeter le domande proposte nei questionari possono avere quattro risposte: 2 con valore negativo e 2 con valore positivo.

Le risposte negative vengono memorizzate con i valori 1 e 2. Le risposte positive invece con i valori 3 e 4. Tutte le altre risposte sono "neutre" al fine del calcolo della media.

Nel calcolo della media delle risposte di una domanda si tiene conto del numero totale di risposte e del numero relativo di ogni risposta. Dato il valore assegnato alle singole risposte, la media ponderata assumerà un valore compreso tra 1 e 4. Per avere una maggiore percezione d ell'andamento della media delle risposte, la media ponderata originale viene normalizzata ai valori -1 e 1: tale valore sarà utilizzato per la r appresentazione grafica delle media.
